

Malvern Wells Weather Station

The rainfall experienced during Friday the 20th of July 2007 was extreme for this area and for the UK. Below are two charts extracted from data produced by my weather station at Malvern Wells, Worcestershire for that day. The rainfall is recorded at 5 minute intervals and in steps of 0.2 mm, hence the rain rate is rather coarse. The total for the day was 118.2 mm (4.65 inches).
